Management Attestation

Data Integrity Validation Process – Disaster Recovery Testing

Field	Detail
Entity	Banco Santander International (BSI – Miami)
Process	Data Integrity Validation (IT Disaster Recovery)
Testing Exercises Covered	November 15, 2025 DR test; February 21, 2026 BCiC datacenter failover exercise (Miami – Telefonica to DR site in Ashburn, VA)
Attestation Date	<u>8/19/2026</u>

1. Background

As part of the Data Integrity Validation process, the IT DR team facilitates, on an annual basis, data integrity validation testing performed by business line testers during actual Disaster Recovery (DR) testing for in-scope applications that store business data. Business line management approval of the testing results is obtained, and evidence of execution is documented in the Business Continuity Management System (BCMS/BCiC).

This attestation is executed by business line management to document review and approval of the data integrity validation testing results for the exercises performed in November 2025 and February 2026.

2. Data Integrity Validation Testing Performed

Data integrity validation testing was executed by business line testers during actual DR testing for the in-scope BSI applications that store business data. Testing results are documented in the Data Integrity Validation Testing record (BCiC export), covering 63 validation entries across 13 applications, including T24, Imaging101, OFAC – BSI, Fedlink – BSI, Swift Interface – BSI, MQ Payment Monitor, Cisco Call Manager, Interface Monitor, FedExport – BSI, FedImport – BSI, ACH Express, BCiC – US, and ReconXpert.

- Business data validation dates: 11/15/2025 (62 entries) and 2/21/2026 (BCiC – US, validated during the datacenter failover exercise from the main datacenter in Miami (Telefonica) to the DR site in Ashburn, VA).
- For every entry, data was validated for **Format, Headers, and Content**, with all results recorded as satisfactory (Y/Y/Y).
- No data inconsistencies, completeness, or accuracy issues were identified in any of the validations performed.

3. Attestation

I, the undersigned, in my capacity as business line management for the in-scope BSI applications, hereby attest that:

1. Data integrity validation testing was performed by business line testers during actual Disaster Recovery testing for the in-scope applications listed in the Data Integrity Validation Testing record for the exercises performed on November 15, 2025 and February 21, 2026.
2. I have reviewed the data integrity validation testing results, including the Format, Headers, and Content validations for each in-scope application.
3. The testing results are satisfactory: data recovered during DR testing was validated as complete and accurate, and no data integrity exceptions were identified.
4. I approve the data integrity validation testing results on behalf of the business line.
5. This attestation, together with the Data Integrity Validation Testing record, will be retained in the Business Continuity Management System (BCMS/BCiC) as evidence of execution of the Data Integrity Validation process, and the **Attestation Date** and **Attestation Provided By** fields in the BCiC Data Integrity Validation Testing records will be updated accordingly.
6. Going forward, business line management approval of data integrity validation results will be documented at the time of testing (via email or signed record) and retained in BCMS.
